

FAST

treatment for kidney stones

Kidney stone attacks can be extremely painful. Now, there's fast relief: the Kidney Stone Fast Track at King's Daughters Ohio Urgent Care Center. Our staff is specially trained to speed diagnosis and treatment and relieve the symptoms associated with kidney stones.

Operating in cooperation with urologist **Christopher W. Schmidt, D.O.**, the Kidney Stone Fast Track offers relief and follow up care in a matter of hours, not days or weeks.

Not all stones require treatment

Many patients require only supportive care during the process of passing a kidney stone.

If the stone is too large to pass normally – or if it is located in an area where it is unlikely to pass – the following treatments are available:

- Lithotripsy: breaking up the stone using shock waves. No surgery or incision is required.
- Ureteroscopy: removing the stone through the urethra.
- Percutaneous Nephrostolithotomy (PCNL): removal of the stone through an incision in the back (very large stones).

**Open 24/7/365: No appointment
needed. Ever.**
